📊 Projects

⬤ETL Project with Python for a Bus Ticket Sales Performance Analysis Dashboard

A complete pipeline for processing and storing data, involving tasks such as downloading from Google Drive, file conversion, CSV processing, and PostgreSQL storage. Utilizing DuckDB for efficient data manipulation, the pipeline ensures data integrity and consistency.

⬤Dashboard for Nutritional Data Analysis of Burger King - Mobile Version

Quickly access calories count versus portion size for each item on the Burger King menu.

⬤Dashboard for Video Game Sales Analysis up to 2016

Identify information about video games, including the best-selling video games of all time up to 2016 and their total revenue.
